ColorGATE

Productionserver 6 for HP Designjet L25500:

The perfect combination for maximum productivity!

Certified for HP DesignJet L25500 Printer

hp

No other software RIP supports the powerful functions of the new HP L25500 latex printer better and more comprehensively that the ColorGATE Productionserver! Manufacturer Hewlett-Packard agrees wholeheartedly – and made Productionserver the world's first RIP solution to be awarded full points in every category in the certification process.

Top features – optimal compatibility
Productionserver enables you to take full advantage of the entire applications range of the innovative HP printer series for indoors and out and to profit from the custom-fit support of the latest HP concepts:

▸ Concatenating – automatic sorting and grouping of jobs according to the print mode for optimal throughput and noticeable timesavings

▸ HP Professional Pantone Emulation (HP PPE) – in combination with the HP PPE-enabled Productionserver, the Designjet L25500 delivers reproduction results that by far surpass all other processes currently on the market

▸ Integrated spectro-photometer – for outstanding image quality and a trouble-free workflow

Productionserver 6 – More powerful than ever before
In the brand-new Version 6, the universal ColorGATE production RIP is now even more powerful. Ultimate performance thanks to such unique functions as

▸ Integrated Parallel Process Manager – Automatic assignment of available RIP processes decrease production downtime to the absolute minimum and increase productivity by up to a factor of four in print-data generation

▸ Ink Saver – Reduces ink costs by up to 30% using the intelligent optimization of color composition

Productionserver 6 Special Editions:
Optimum value for money for all users

The platform-independent Productionserver 6, which can be expanded to meet new needs at any time, is impressive in its speed, quality and production reliability. ColorGATE has now designed two special editions especially for the innovative HP Designjet L25500 that offer incredible performance at an amazingly attractive price – this is a decision that it has never been so easy for users to make:

Productionserver 6 HP L25500 Best Price Edition
The professional practical choice at an unbeatably attractive price

Productionserver 6 Pro
+ 1 queue
+ 1 RIP process
+ 1 HP L25500 printer driver

1.995,– € [1]

Productionserver 6 HP L25500 Producer Edition
Top range of features for price-conscious power users

Productionserver 6 Pro
+ 1 queue
+ 2 RIP processes for optimal productivity
+ 1 HP L25500 printer driver
+ 1 Ink Saver for the HP L25500
+ 1 Express Profiler EPFM

2.995,– € [1]

Productionserver 6 HP L25500 Special Upgrade Bundle

1 Ink Saver for the HP L25500
+ 1 Express Profiler EPFM

900,– € [1]

Exclusively available with the purchase of an HP Designjet L25500 and an upgrade to Productionserver 6 from any other previous version [2]
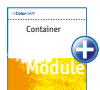

Highlights at a glance: Productionserver 6 HP L25500 Special Editions function highlights

Tiling — Allows the freely definable, storable segmentation of large-format printing jobs; accepts segmentation changes without requiring a new RIP process

Container — High-performance module for the creation of collective jobs with many additional functions, including the optimization of job placement, the creation and management of job duplicates, the output of multi-paged PDF and PostScript files, the level-oriented placement/output of jobs to include logos, etc.

Color Replacement — Color replacement with direct inclusion of the measurement tool for any original colors or color areas (RGB, CMYK, spot) with CMYK and L*a*b*. Can also be used for vectors, raster data and text. Supports Pantone® and HKS® color replacement tables.

Express Profiler — Uses the specto photometer integrated into the HP Designjet L25500 to create high-quality ICC profiles within just a few minutes; ideal for frequent material changes. Only one target has to be printed and measured.[3]

Ink Saver — Makes it possible to reduce ink costs by up to 30 percent. Ink-Saver technology uses special DeviceLink profiles to optimize color composition, whereby CMY portions of the image are reduced and replaced by an increased portion of black. Other advantages: stabilization of the printing process, improved grey balance, shortened drying times.[3]

Media Device Synchronization — User-friendly system recalibration to guarantee consistent out-put quality.
