PS6 Color Optimizer Maximum performance at an unbeatable price

Whether it's digital, offset or screen printing – the new PS6 Color Optimizer adds the high-performance Color Server and Ink Saver technology from market leader ColorGATE seamlessly to virtually any RIP used in print services today. The result: smooth compatibility and perfect output – at a remarkably low price!

Producing according to established color standards – fully automatized color conversion

More and more print buyers and brand owners make the placement of their orders dependent on the use of binding standards in production – on the basis of ISO, FOGRA, GRACoL or the G7 standard. That's no problem for the PS6 Color Optimizer: state-of-the-art Color Server technology transforms all print data fully automatically into any color space required – without any new profiling necessary.

Integrated: DeviceLink profiles in high-end quality

The most important DeviceLink profiles – in high-end quality, of course – already come included with the PS6 Color Optimizer standard installation; other profiles can be added as needed.

For perfect production based on specific in-house standards, any number of MIM combinations can also be created, edited and used at any time.

Fully automatic color space transformation without any new profiling with the high-end quality DeviceLink profiles that come included: this example illustrates the conversion of ISO Coated v2 (left) to ISO Newspaper 26v4.

Just like magic:

Ink Saver technology from ColorGATE

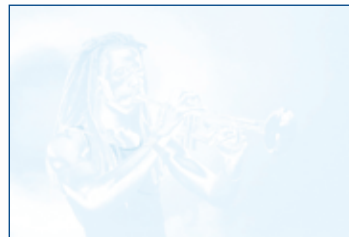

The very unique Ink Saver technology from Color Management specialist ColorGATE is part of the PS6 Color Optimizer. It enables the highest-quality and most economical color composition for any print process – without any new profiling, because Ink Saver from ColorGATE is able to evaluate and optimize the output profiles of the RIPs integrated into the workflow. The result: Excellent quality and up to 30 percent in savings for the ink costs.

Don't give cost and deadline pressures a chance!

Real bargain – already available starting from € 6,900

Optimum color composition – drastically reduced ink consumption
Even extremely critical experts are impressed: although the naked eye is unable to detect any compromise in terms of quality, there's an undeniable advantage in terms of costs: up to 30 percent savings in ink – and that adds up to a lot at the end of the day!

Optimize your investment strategy now!

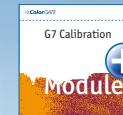

Regardless of which RIP you're using right now – the PS6 Color Optimizer can be seamlessly integrated into your existing production environment and can radically improve your competitive edge. And you optimize your investment strategy at the same time: with the PS6 Color Optimizer you have state-of-the-art, very powerful RIP software for your next printer. This innovative solution is a full-fledged member of the multiple-award-winning Productionserver 6 family from ColorGATE, the internationally leading specialist for RIP software and color management.

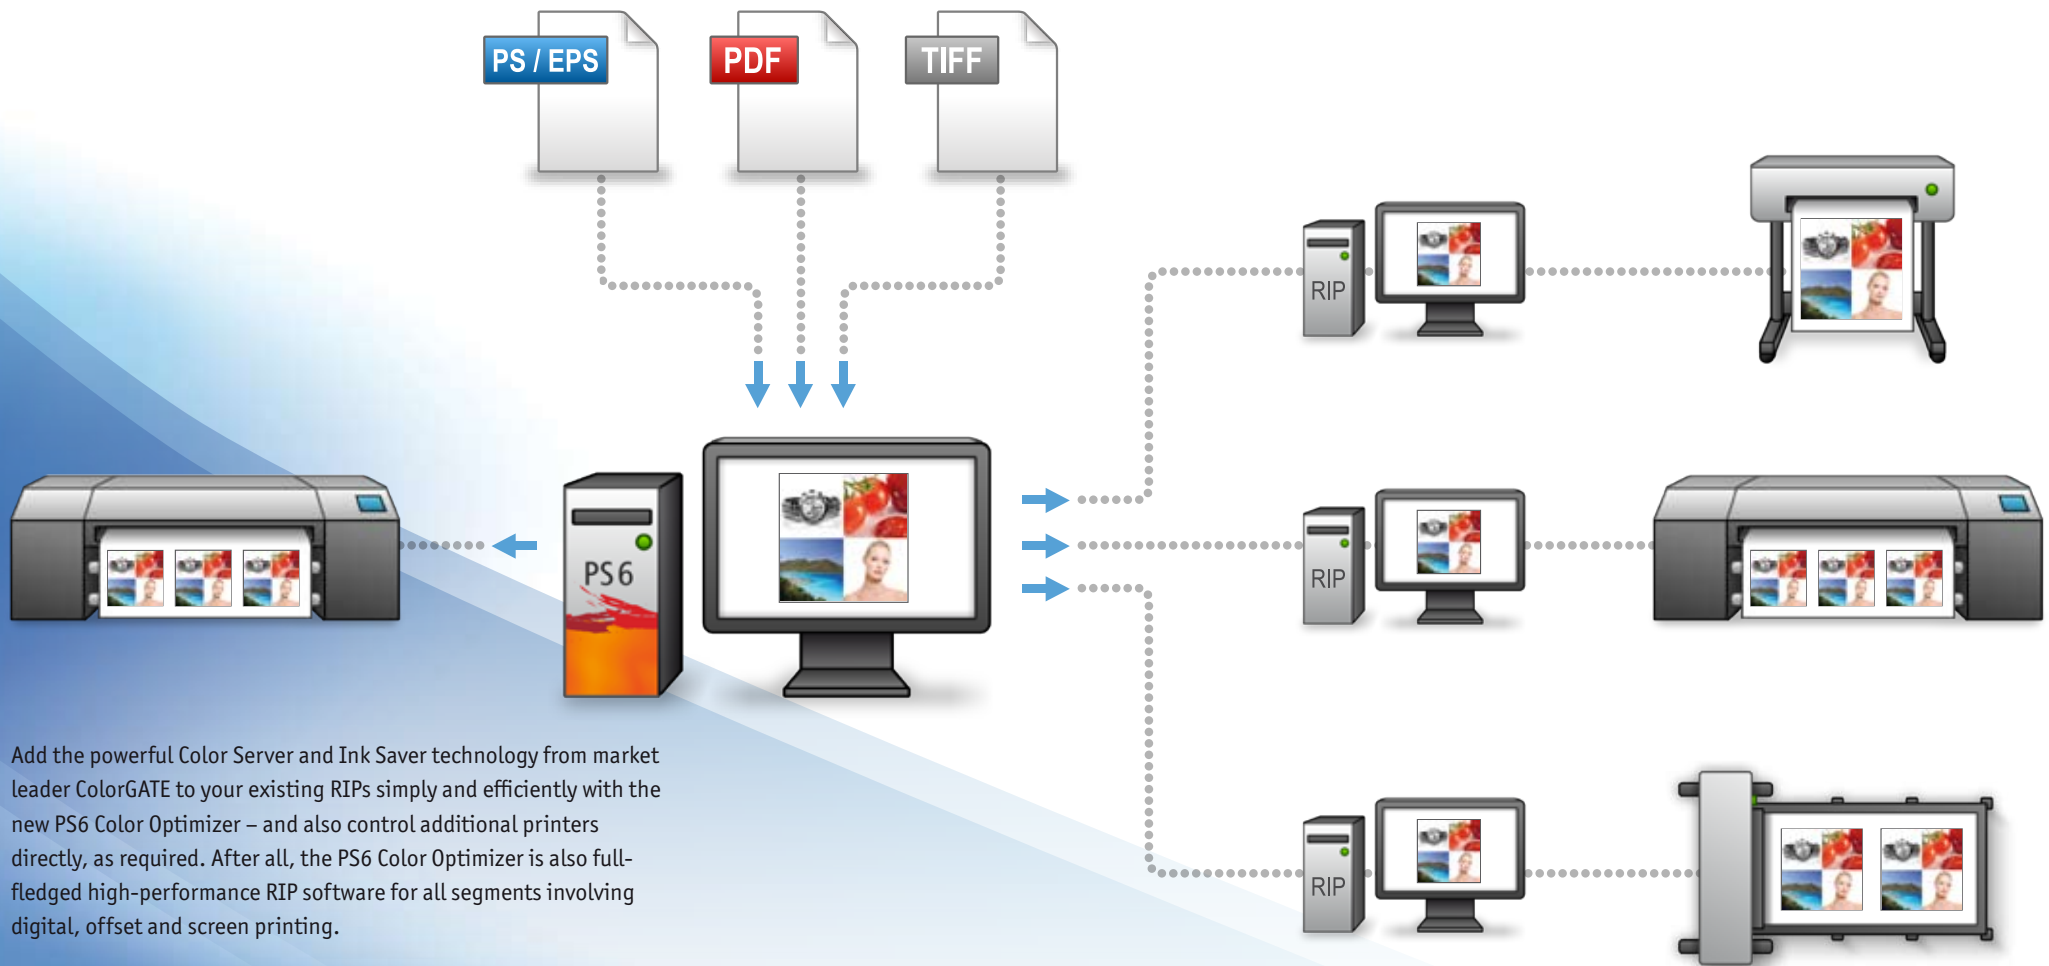

What comes included:

15 x Hotfolders · 1 x Queue · 3 x RIP Processes · 1 x Ink Saver Cat 3 · 1 x Color Optimizer Driver Cat 3.

Can be expanded and upgraded at any time to meet new needs, with the G7CM calibration module, for example, to support the G7 standard based on the ISO norm 12647

File formats · Raster process: JPEG, TARGA, TIFF, BMP, PCD, PSD and other popular raster formats; Postscript 3, PDF 1.6, PDF/X-1a, EPS, DCS 2.0; separated PDF data; output of PDF/X-3 files; page and section selection possible

Add the powerful Color Server and Ink Saver technology from market leader ColorGATE to your existing RIPs simply and efficiently with the new PS6 Color Optimizer – and also control additional printers directly, as required. After all, the PS6 Color Optimizer is also full-fledged high-performance RIP software for all segments involving digital, offset and screen printing.

ColorGATE RIP software offers excellent solutions for maximum productivity, perfect process management and optimum workflow in imaging, printer drivers, digital proofing, Computer-to-Plate (CtP), Web-to-Print (W2P), Print-to-Cut, large-format printing, campaign printing along with textile printing and inkjet applications.

ColorGATE Digital Output Solutions GmbH is a leader in the development of powerful ICC profiles and printer drivers for a wide range of different printing systems and digital-printing applications. Multiple award-winning ColorGATE RIP software, which is regularly certified with top marks, supports the spectrophotometers, cutting tables and cutting plotters of all the popular manufacturers and sets standards in professional color management.

The company, which was first formed in 1997, maintains an international service and sales network. Cooperation with authorized sales partners guarantees support that meets practical needs.
